FAQ

Q: How does "Atomic Blastman" differ from its predecessor, Atomic Bomberman (1997)?
A: Apart from some game mechanincs, in many ways. Atomic Blastman extemds the world of bombing with new characters and colors, new graphics, menus, game modes, arenas, sounds, emotes and last but not least, the possibility to play online with anyone.

Q: Why was "Atomic Blastman" chosen as the name for the game?
A: “Bomberman” is a trademark of KONAMI Studios. As much as we would love to use “Bomberman” as our title, it is strictly forbidden without a KONAMI agreement.

Q: Is Indiependent Games Studio (IGS) related to KONAMI?
A: No, Indiependent Games Studio is, as its name suggests, independent.

Q: What has been the most challenging aspect of developing "Atomic Blastman"?
A: Deep training the AI Blastmen was the hardest milestone to reach in our development journey.

Q: What are the main gameplay mechanics in "Atomic Blastman"?
A: Place the bomb, wait for the explosion, loot the item, and kill the enemy. Atomic Blastman has similar game mechanics to Atomic Bomberman: bomb placement, kick, punch, throw, diseases, triggers, etc.

Q: Can players expect any additional game modes apart from single-player and multiplayer?
A: Yes, IGS plans to keep players entertained with new play modes like soccer, volleyball, hide and seek, and many others.

Q: How does the in-game reward system work, and what can players unlock?
A: While playing and winning online, players are rewarded with XP. XP can then be used to unlock game assets such as skins, materials, deaths, emotes, arenas, and themes in our in-game shop.

Q: Are there any plans for seasonal or limited-time content?
A: Yes, the in-game shop showcases featured products.

Q: What kind of post-launch support will "Atomic Blastman" receive?
A: Patches include new game content, in-game shop products, new game modes, holiday content, and constant support for bug fixes.

Q: What measures have been taken to ensure a stable and fair online environment?
A: During online matches, quitting early leads to a gradual increase in penalties for the host, prohibiting the player from winning XP, queuing up, hosting games, and, ultimately, banning the account.

Q: How does "Atomic Blastman" utilize AI and neural networks in gameplay?
A: AI Blastmen analyze their current game state to predict the best possible move in any situation by using a trained neural network based on Bellman’s equation.

Q: Will there be any customization options for AI difficulty?
A: Yes, AI Blastmen will feature difficulty levels.

Q: Are there any rewards from single-player modes?
A: No, player progress and rewards can only be obtained by playing online matches.

Q: What inspired the design choices for the characters and environments in "Atomic Blastman"?
A: We want our characters to look cute and clumsy to balance out the bombing theme of the game.

Q: Who composed the game's soundtrack, and what can players expect from the music?
A: The Atomic Blastman soundtrack is composed and mastered by Roscan Teodor, the owner of IGS. The soundtrack is designed to energize or calm the player, depending on the in-game environment.

Q: Why does an Epic Games window pop up during login?
A: No matter the launcher you are playing on, all players need a common online subsystem. Because Atomic Blastman has been developed using Unreal Engine 4, the natural and most documented approach for an online subsystem is Epic Games Services (EOS). This doesn't mean users need an Epic account to play. You can log in with your platform account, e.g., Steam. It is true that the first time you sign in, a linked Epic account is created, but only as a proxy. Unfortunately, this is the price of cross-play with other users. It has been a tough development decision, but since I don't have any dedicated servers, it

seems it's the only one. We currently support login through Steam and Epic accounts.

Q: What is the purpose of the reinforcement learning environment?
A: The RL environment is meant to provide an easy and interactive way to train AI agents. This feature is aimed at AI enthusiasts and students who want to grasp the basics of reinforcement learning by experimenting with countless hyperparameters and game configurations.

Q: How does Atomic Blastman support its developers?
A: Atomic Blastman is entirely free for the entire community without exception. The game is maintained by a couple of passionate students who strive to create the best possible games with limited resources. Atomic Blastman has an in-game shop featuring cosmetics. A lot of these products are obtainable solely through online progress and regular gameplay. Microtransactions are a way to support the entire team and offer quality handmade products at relatively low prices compared to current game markets.
